To Whom It May Concern:

RE: Letter of Recommendation for David L. Gitter & GO InfoTek

I am writing this letter as Founder and President of Micro Security Systems Integration, Inc. (MSSI) to offer my strongest possible recommendation for David (Dave) Gitter, who has served as our vCTO and vCISO since 2005.

In nearly two decades working alongside Dave, I have come to consider him one of the most brilliant people I have ever had the privilege of working with. He has a unique way of approaching problems – and identifying paths to solutions that others in the room simply do not see. It is this ability, more than any single credential, that has made him invaluable to MSSI's growth and reputation, primarily in our mission critical Enterprise Accounts.

Nowhere is that ability more evident than in Dave's work for the Fort Lauderdale-Hollywood International Airport (Broward County Aviation Department). When MSSI bid on what would become our first significant IP CCTV deployment - at a time when analog systems still dominated our industry - the airport's requirements demanded integration between two entirely unrelated security platforms, with an explicit condition that the Access Control System vendor perform no customization of their own platform to support it. Dave identified the only common ground between the two systems, an obscure shared serial protocol, and personally designed a proprietary methodology for translating alarm and camera data between them - he then worked directly with the proposed CCTV platform's CTO, and their senior developers, to see that methodology through to final implementation and customer acceptance. That pilot, consisting of 166 cameras and 10 NVRs, became the foundation for a relationship that has grown into more than 100 servers, 3,000 cameras, 15PB of storage, and over twenty years of 24/7/365 support for one of South Florida's largest independent IP CCTV systems.

Additionally, as the original VMS platform was later acquired and evolved into what is now American Dynamics' Video Edge system, Dave stayed at the forefront of the technology himself by becoming one of only a handful of individuals outside the manufacturer to earn Video Edge Master Tech certification, thus demonstrating his total commitment to our clients' needs.

Dave's technical contributions to MSSI extend well beyond any single account. We have relied on his vCISO expertise to build and maintain our cybersecurity standards and incident response capabilities, helping us meet both our internal security obligations and the expectations of our government and enterprise healthcare customers.

While MSSI does not directly handle protected health information, the cybersecurity and incident response framework Dave created has helped us meet the expectations of HIPAA-regulated institutions and strengthen our relationships with other hospital clients.

MSSI's own growth has not gone unnoticed in our industry as we have ranked nationally on SD&I magazine's Fast50 list in both 2012 and 2018, which recognized America's fastest-growing systems integrators. I can say without reservation that Dave's technical expertise, and active participation as one of our leadership team members, has been one of the foundational reasons that growth was possible.

I recommend Dave Gitter and GO InfoTek, Inc. without reservation and welcome any further discussion on this matter.

Sincerely,

Stephen De Molina, Founder & President
